

MERCHANTPAY LITE

User Roles, Mappings, and User Journeys

1. User Roles

Merchant

- **Description:** Business owners and commercial entities using MerchantPay Lite to securely accept online payments from their customers for goods and services.
- **Business Goals:** Collect payments promptly, view consolidated payment histories, monitor daily bank settlements, and quickly resolve payment exceptions to maintain healthy cash flow.
- **Business Challenges:** Multiple external payment integrations leading to fragmented reporting, delayed fund settlements, high manual reconciliation effort, and poor real-time payment status visibility.
- **Business Value:** Provides a centralized, secure payment collection framework that streamlines fund acceptance, improves settlement speed, and automates payment reporting.

Customer

- **Description:** Individual buyers or entity representatives purchasing goods or services provided by merchants operating on the platform.
- **Business Goals:** Complete checkout transactions quickly, receive immediate verification of payment completion, and experience a secure payment flow.
- **Business Challenges:** Frequent payment failures, delayed confirmation receipts, unclear error notices during checkout, and lack of transaction transparency.
- **Business Value:** Delivers a dependable, transparent payment processing environment that ensures immediate transaction feedback and reduces checkout friction.

Bank Operations Officer

- **Description:** Internal bank personnel responsible for administrative payment oversight, settlement verification, financial reconciliation, and operational issue resolution.
- **Business Goals:** Maintain oversight of daily payment activities, ensure accurate account reconciliation, investigate transaction failures, and generate comprehensive operational reports.
- **Business Challenges:** Reliance on manual reconciliation processes, fragmented operational reporting tools, time-consuming dispute investigations, and high operational overhead costs.
- **Business Value:** Centralizes operational monitoring, reduces manual workload, accelerates transaction investigations, and improves settlement accuracy.

System Administrator

- **Description:** Internal technical governance personnel responsible for managing overall platform operations, account provisioning, platform availability, and security compliance.
- **Business Goals:** Maintain high system availability, manage user access permissions, oversee merchant onboarding, and safeguard platform data security.
- **Business Challenges:** Balancing system scalability with security compliance, managing access rights safely across diverse user roles, and maintaining comprehensive operational audit logs.
- **Business Value:** Ensures operational governance, system reliability, regulatory compliance, and scalable platform administration.

Customer Support Representative

- **Description:** Frontline operational personnel tasked with responding to customer and merchant inquiries, troubleshooting transaction complaints, and providing payment resolution assistance.

- **Business Goals:** Resolve user inquiries quickly, locate transaction records efficiently, provide accurate payment status updates, and minimize complaint resolution cycles.
- **Business Challenges:** Incomplete transaction visibility, reliance on disparate legacy systems to trace payment status, and slow inquiry turnaround times.
- **Business Value:** Enables single-point visibility into transaction activity and historical logs, improving response accuracy and customer satisfaction.

Fraud & Risk Officer

- **Description:** Internal risk management specialists focused on monitoring transaction activity, preventing fraudulent transactions, managing chargebacks, and mitigating financial risks.
- **Business Goals:** Protect bank and merchant revenue, identify suspicious payment activity early, enforce risk controls, and minimize financial exposure.
- **Business Challenges:** High transaction volume making manual risk identification difficult, unauthorized financial activities, potential security breaches, and legal exposure.
- **Business Value:** Delivers automated risk oversight and control capabilities, protecting ecosystem participants from financial fraud and operational losses.

External Compliance Auditor

- **Description:** Regulatory and compliance oversight authorities responsible for auditing financial records, system security integrity, operational policies, and statutory compliance.
- **Business Goals:** Verify operational compliance with regulatory guidelines, evaluate financial audit trails, and ensure systemic data security integrity.
- **Business Challenges:** Gathering comprehensive audit trails from fragmented systems, verifying compliance across multiple operational processes, and ensuring data integrity.
- **Business Value:** Provides verifiable, transparent audit trails and centralized reporting access to simplify regulatory reporting and compliance verifications.

Developer / System Integrator

- **Description:** Technical partner teams responsible for connecting merchant enterprise platforms and e-commerce websites to the payment gateway service.
- **Business Goals:** Integrate merchant systems smoothly, enable automated payment collection, verify integration reliability, and minimize technical setup delays.
- **Business Challenges:** Managing complex third-party payment connections, addressing technical integration errors, and adapting to custom business requirements.
- **Business Value:** Streamlines merchant setup, accelerates onboarding timelines, and enables automated payment acceptance for merchant businesses.

2. Business Responsibilities by Persona

Merchant

- **Creating Payment Requests:** Generating payment requests to initiate secure fund collection for goods or services offered.
- **Monitoring Incoming Payments:** Tracking customer transaction statuses and fund receipts in real time.
- **Reviewing Settlements:** Monitoring bank payout schedules, reviewing settlement details, and verifying payout balances.
- **Managing Business Information:** Maintaining business profile information, updating payment collection preferences, and ensuring account data accuracy.
- **Tracking Business Performance:** Utilizing transaction data and summary reports to evaluate sales activity and revenue trends.

Customer

- **Choosing a Preferred Payment Method:** Selecting the payment instrument best suited for completing the transaction.
- **Completing Payments:** Authorizing and submitting accurate payment information to fulfill purchasing obligations.
- **Confirming Payment Information:** Reviewing checkout details and verifying transaction receipts post-purchase.
- **Keeping Payment Credentials Secure:** Safeguarding personal financial identifiers and authentication credentials during payment execution.

Bank Operations Officer

- **Monitoring Settlements:** Overseeing financial transfer processes to ensure merchant payout schedules are executed accurately.
- **Reconciling Payment Records:** Cross-referencing transaction activity logs against bank settlement funds to maintain financial accuracy.
- **Investigating Transaction Issues:** Tracing payment failures, analyzing dispute origins, and guiding exception resolution processes.
- **Resolving Settlement Discrepancies:** Addressing financial variances, unapplied funds, and processing delays to balance operational accounts.

System Administrator

- **Managing Merchant Onboarding:** Authorizing new merchant registrations, reviewing profile data, and activating service privileges.
- **Governing Platform Access & Permissions:** Assigning security roles, managing operational entitlements, and ensuring appropriate administrative controls.
- **Ensuring Platform Health & Security:** Overseeing system reliability, maintaining platform operational capabilities, and enforcing data security standards.
- **Maintaining Audit Logs:** Preserving comprehensive operational activity logs to satisfy regulatory requirements and operational reviews.

Customer Support Representative

- **Locating Transaction Records:** Researching customer and merchant payment records to address operational inquiries.
- **Analyzing Failure Causes:** Reviewing transaction activity logs to identify causes of payment interruptions or delays.
- **Assisting Inquiry Resolution:** Guiding merchants and customers toward resolving payment discrepancies and re-issuing transaction notices.

Fraud & Risk Officer

- **Monitoring Flagged Transactions:** Reviewing suspicious or high-risk transaction activities against institutional risk criteria.
- **Enforcing Operational Risk Controls:** Temporarily holding payouts or placing restrictions on accounts flagged for security review.
- **Mitigating Financial Risk:** Managing chargeback disputes, investigating unauthorized transaction attempts, and limiting institutional liability.

External Compliance Auditor

- **Reviewing System Audit Trails:** Inspecting system usage records, administrative changes, and financial processing trails.
- **Verifying Regulatory Compliance:** Assessing gateway operations against industry financial

standards, data security norms, and legal rules.

- **Exporting Compliance Data:** Extracting financial and security operational logs for formal regulatory submission and governance reviews.

Developer / System Integrator

- **Establishing Technical Integration:** Connecting merchant e-commerce platforms to payment collection services.
- **Verifying Payment Processing Workflows:** Validating that merchant platforms correctly initiate payments and receive status updates.
- **Maintaining Connection Security:** Ensuring API authentication credentials and callback configurations adhere to security practices.

3. Business User Journeys

Merchant User Journey

- **Business Need:** The merchant needs an efficient way to accept digital payments from customers, eliminate payment collection bottlenecks, track incoming revenues, and streamline bank account settlements.
- **Business Process:**
 - **Onboarding & Access:** The merchant completes business profile setup, verifies account credentials, and accesses the payment administration interface.
 - **Payment Request Generation:** The merchant creates digital payment requests to facilitate transactions for sales opportunities.
 - **Real-Time Oversight:** The merchant tracks sales activity as customer payments are processed, monitoring real-time completion statuses.
 - **Reconciliation & Reporting:** The merchant reviews daily transaction summaries and settlement reports to verify that funds are transferred accurately to their bank account.
 - **Exception Resolution:** In cases where payments fail, the merchant reviews transaction details to identify the cause and assist the customer in completing the transaction.
- **Expected Business Outcome:** Accelerated cash collection, reduced manual reconciliation effort, complete payment visibility, and dependable fund settlements.

Customer User Journey

- **Business Need:** The customer wants a simple, intuitive, and trustworthy checkout process to pay for goods or services online without operational errors or uncertainty.
- **Business Process:**
 - **Checkout Initiation:** The customer initiates the purchase process by selecting their preferred payment method.
 - **Payment Fulfillment:** The customer provides the necessary payment authorization details to complete the purchase.
 - **Verification & Confirmation:** The system processes the payment, delivering immediate notification confirming whether the transaction was successful or encountered an issue.
- **Expected Business Outcome:** A secure checkout experience, immediate confirmation of transaction completion, and minimal purchase friction.

Bank Operations Officer User Journey

- **Business Need:** The Operations Officer requires unified operational visibility to oversee daily merchant payment activities, resolve operational exceptions, and ensure accurate financial reconciliation.
- **Business Process:**
 - **Daily Operational Monitoring:** The officer monitors daily processing volumes across all active

merchants on the network.

- **Transaction Investigation:** The officer investigates payment failures and merchant payout inquiries using transaction event histories.
- **Reconciliation Management:** The officer matches platform payment totals with bank settlement batches, identifying and resolving any financial discrepancies.
- **Operational Reporting:** The officer generates daily settlement logs and summary reports for executive leadership and internal audit teams.
- **Expected Business Outcome:** Efficient operational oversight, streamlined financial reconciliation, reduced support escalation resolution times, and accurate merchant payouts.

System Administrator User Journey

- **Business Need:** The Administrator requires centralized management capabilities to provision users, control operational access, and maintain data security, availability, and regulatory compliance.
- **Business Process:**
 - **Merchant Provisioning:** The administrator reviews and approves new merchant access, activating operational payment privileges.
 - **Access Governance:** The administrator assigns user roles, reviews operational permissions, and maintains access security boundaries across all organizational roles.
 - **System Oversight:** The administrator checks system activity metrics and performance health indicators to ensure continuous processing availability.
 - **Audit Log Management:** The administrator monitors operational logging processes to preserve comprehensive records for financial and security compliance requirements.
- **Expected Business Outcome:** Controlled system access, sustained high availability, robust operational security, and complete audit readiness.

Customer Support Representative User Journey

- **Business Need:** The Support Representative needs efficient lookup tools to investigate merchant and customer transaction issues, explain failure causes, and resolve customer complaints promptly.
- **Business Process:**
 - **Inquiry Intake:** The representative receives a customer or merchant inquiry regarding an unconfirmed payment or settlement delay.
 - **Information Retrieval:** The representative searches for the payment using relevant customer or business reference identifiers.
 - **Status & Error Analysis:** The representative evaluates transaction step logs to determine the exact cause of processing interruptions.
 - **Issue Resolution:** The representative provides status clarity, triggers updated transaction notifications, or escalates complex operational issues to Bank Operations.
- **Expected Business Outcome:** Faster inquiry resolution, improved customer satisfaction, reduced operational confusion, and consistent communication.

Fraud & Risk Officer User Journey

- **Business Need:** The Risk Officer needs visibility into payment patterns to safeguard platform transactions, prevent fraud losses, and ensure risk compliance.
- **Business Process:**
 - **Risk Queue Monitoring:** The officer monitors automated risk indicators to identify abnormal payment patterns or high-risk transactions.
 - **Transaction Investigation:** The officer analyzes transaction details, merchant activity trends, and payment attempts to determine potential risk exposure.
 - **Risk Control Enforcement:** The officer places temporary holds on flagged merchant payouts or suspicious transactions while conducting further safety verifications.
- **Expected Business Outcome:** Reduced risk of financial fraud, protection of institutional reputation,

and reduced chargeback exposure.

External Compliance Auditor User Journey

- **Business Need:** The Compliance Auditor requires verified access to operational trails, transaction logs, and financial settlement records to confirm statutory compliance.
- **Business Process:**
 - **Compliance Review Initiation:** The auditor specifies the scope and timeframes for regulatory inspection.
 - **Audit Trail Examination:** The auditor inspects read-only system logs, user access activities, and settlement balances.
 - **Data Extraction & Verification:** The auditor exports structured activity logs to verify operational accuracy against industry compliance standards.
- **Expected Business Outcome:** Transparent compliance reviews, validated operational reporting, and verification of institutional governance standards.

Developer / System Integrator User Journey

- **Business Need:** The Integrator needs a reliable integration process to link merchant systems with the payment gateway, enabling automated payment processing.
- **Business Process:**
 - **Integration Setup:** The integrator obtains system connection credentials and configures payment settings according to business needs.
 - **Workflow Validation:** The integrator tests payment workflows, payment status messaging, and transaction response handling.
 - **Production Activation:** The integrator enables the payment integration on live merchant sales platforms to allow customer transactions.
- **Expected Business Outcome:** Efficient merchant deployment, dependable payment integration, and automated business payment collection.
